7. What do you understand by warping text in Photoshop?
8. How will you add effects to the contents of a layer?

## D. Answer the following questions(Answers)

**(1) Ans. ->**

The Healing Brush Tool allows you to repair imperfections such as scratches, blemishes and marks in an image. While working with this tool, you pick up sample pixels (pixels to be used for repairing) from the adjoining portion of an image. The Healing Brush Tool matches the texture, lighting, transparency and shading of the sampled pixels and applies them to the pixels that are being repaired.

**The Spot Healing Brush Tool** works in a similar manner to the Healing Brush Tool except that it does not require the sampling point to be set. It automatically picks up the sampled pixels from around the area to be retouched. This tool can be used to quickly remove spots, blemishes and other marks from photographs.

**(2) Ans. ->** The Clone Stamp Tool lets you duplicate the parts of an image by setting a sampling point in the image to be cloned. The cloned image can be drawn over another image or part of the same image.

**(3) Ans. ->**

The three variants of the Eraser tool are: Eraser Tool, Background Eraser Tool and Magic Eraser Tool.

**(4) Ans. ->**

Layers can be thought of as transparent sheets mounted on the top of each other that let us work on an individual part or an element of an image without affecting the other parts or elements.

**(5) Ans. ->**

Filters let you change the appearance of an image by adding special effects to it. For example, you can use the Stylize filters to give a painted effect to your images, the Render filters to create 3D shapes, reflections in an image and so on.

**(6) Ans. ->** The Dodge Tool is used to lighten the areas of an image whereas the Burn Tool is used to darken the areas of an image.

**(7) Ans. ->**

Warping Text is used to warp the shape of the text in a number of interesting ways such as that of a wave, a flag or an arc.

**(8) Ans. ->**

Photoshop offers various layer effects that allows you to enhance the look of the contents of a layer. Some of these effects include shadow, glow, bevel, emboss and overlay.

The steps to apply the layer effects are:

Step 1: Select a layer in the Layers panel.

Step 2: Choose Layer  Layer Style.

Step 3: The Layer Style dialog box appears. Choose the desired effect by clicking the corresponding check boxes.

Step 4: Set appropriate options for the selected effect on the right side of the dialog box.

Step 5: Click OK to apply the effect.
