

CROP PRODUCTION AND MANAGEMENT

Learning about cultivation of crops and several activities undertaken by farmers in crop production and its management

Notes Chapter - 1

❖ **Crop** :- When plants of the same kind are grown and cultivated at one place on a large scale. It is called crop.

➤ Example : crop of wheat – all plants grown in a field are of wheat.

❖ **Agricultural Implements :**

Tools used for the purpose of various agricultural activities.

Example : plough, hoe, cultivator etc.

❖ **Agricultural Practices:** General activities under taken by the farmer own a period of time to cultivate crops are called agricultural practices.

❖ Preparation of Soil :

- It is the first step before growing a crop
- Soil has to be loosed.
- The process of loosening and turning of soil is called tilling/ploughing.
- The ploughed fields have big pieces of soil called crumbs.
