

Q 1. Did the front wheel wobble? What is your opinion? Give a reason for your answer.

Ans. No, the front wheel didn't wobble. It was alright, but it began to wobble when the author's friend shook it violently. After repair some of its little balls were lost. Then it really began to wobble.

Q 2. In what shed?

Ans. When the author returned from the tool shed, he found his friend sitting on the ground with the front wheel between his legs. He was turning it round between his fingers. The remaining parts of the machine were lying on the ground.
